INTRODUCTION

GAME OVERVIEW

You've been mugwump hunting all weekend. It's cold and damp in this swamp, but at last you have four of the critters cornered. The only problem is they're chameleon-like and you must now try to ferret them out from their surroundings. They're in nature's perfect hideout, but to give you a fighting chance to find them, we've transformed their hideout into a ten-by-ten grid. You track down the mugwumps by entering numbers from the keyboard representing horizontal and vertical coordinates on the grid. Any mugwump you discover yelps and flashes on the screen to admit defeat. But, because we're animal lovers at heart, you have only ten chances to locate all four mugwumps. Any you don't discover go free. Good hunting!

REQUIRED ACCESSORIES

- 8K RAM for cassette version
- 16K RAM for diskette version
- ATARI BASIC Language Cartridge
- ATARI 410 Program Recorder for cassette
- ATARI 810 Disk Drive for diskette

GETTING STARTED

1. If you have the cassette version of MUGWUMP:

- a. Insert the game cassette in the program recorder, press REWIND, and then press PLAY.
- b. Type CLOAD and press the RETURN key.
- c. After the game loads into RAM, you'll see the READY prompt. Type RUN and press the RETURN key.

If you have the diskette version of MUGWUMP:

- a. Turn on your disk drive and insert the game diskette.
- b. Turn on your computer and turn on your video screen. MUGWUMP will load into computer memory and start automatically.

PLAYING MUGWUMP

DISPLAY SCREEN

Once you load the game, you'll see a display screen like this (the bottom line first displays the COPYRIGHT 1981 ATARI notice for about ten seconds):

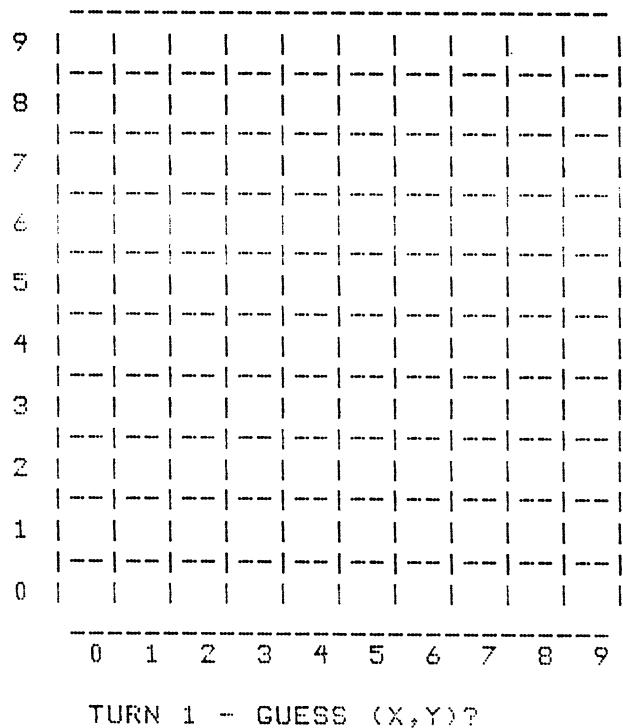

Figure 1. MUGWUMP Display Screen

At the start of the game, the grid is empty. But four mugwumps are lurking behind four of the squares, and your job is to find them!

TRACKING DOWN MUGWUMPS

To guess where a mugwump might be hiding, pick a square. You can identify any square on the grid by using the number across the bottom (called the X-coordinate) and the number down the left-hand side (called the Y-coordinate) corresponding to that square. Separate your two digits with a comma. For example, suppose we want to pick a square two-thirds of the way across the grid and one-third of the way up the grid. In this case, we would choose the square that is number five across and number two up and we would enter our guess like this:

TURN 1 - GUESS (X,Y)?5,2

Figure 2 shows the X the computer entered on the grid to record our guess (notice that it also displays the prompt for our second guess under the grid).

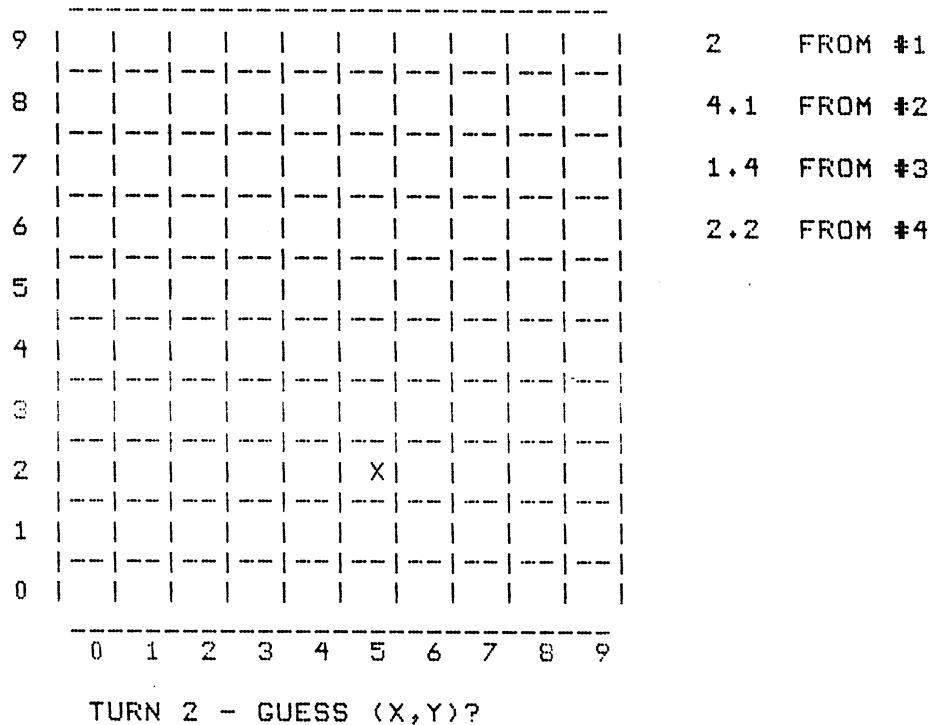

Figure 2. MUGWUMP Display Screen--Guess 1

Each time you guess a location, two actions can occur. First, if you locate a mugwump, its picture displays to the right of the grid and its number displays in its grid location. For example, if Mugwump #2 had been hiding in square 5,2 , then the square would have displayed a 2 instead of an X. However, we guessed wrong, and so the square contains only an X .

Second, to the right of grid appear the distances each hidden mugwump is from our guess. For example, Mugwump #1 is 2 squares from square 5,2, and Mugwump #2 is 4.1 squares from square 5,2. Write these numbers down. As you accumulate these distances on each turn, you'll find you can zero in on a mugwump more rapidly.

A whole number usually means a mugwump is hiding in a straight horizontal or vertical line from your current square. A number with a decimal value means the mugwump is hiding in a square that is diagonal to your current square. Sometimes, however, these rules don't hold--mugwumps are sneaky critters!

Let's see how we can use this information to trap a mugwump. Let's pick a square that is two horizontal or vertical squares away from our first guess--to see if Mugwump #1 is hiding there. Let's choose square 3,2 . We enter our guess as follows:

TURN 2 - GUESS (X,Y)?3,2

The grid now displays two guesses--our first and our current guess:

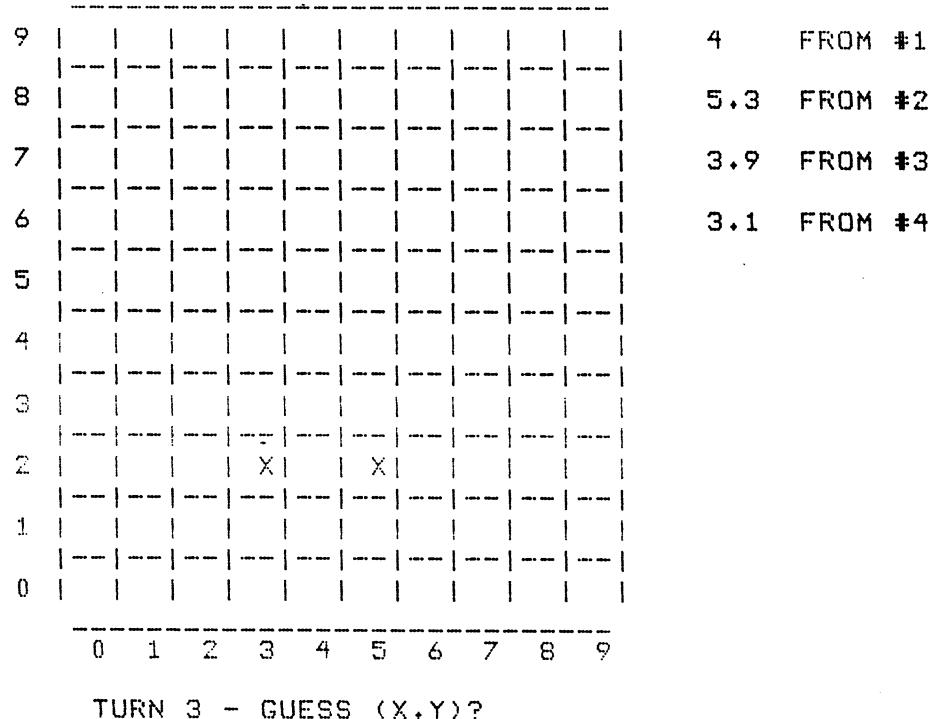

Figure 3. MUGWUMP Display Screen--Guess 2

Now we have two pieces of information about each mugwump. Let's try to track down Mugwump #1. We know that she's two squares away from square 5,2 and four squares away from square 3,2. Two and four are whole numbers, and so a good guess is that the mugwump is hiding in a square located in a straight vertical or horizontal line from our two guesses. We'll mark each square that is two squares away from square 5,2 either vertically or horizontally with an asterisk (*), and we'll mark each square that is four squares away from square 3,2 either vertically or horizontally with a plus (+),

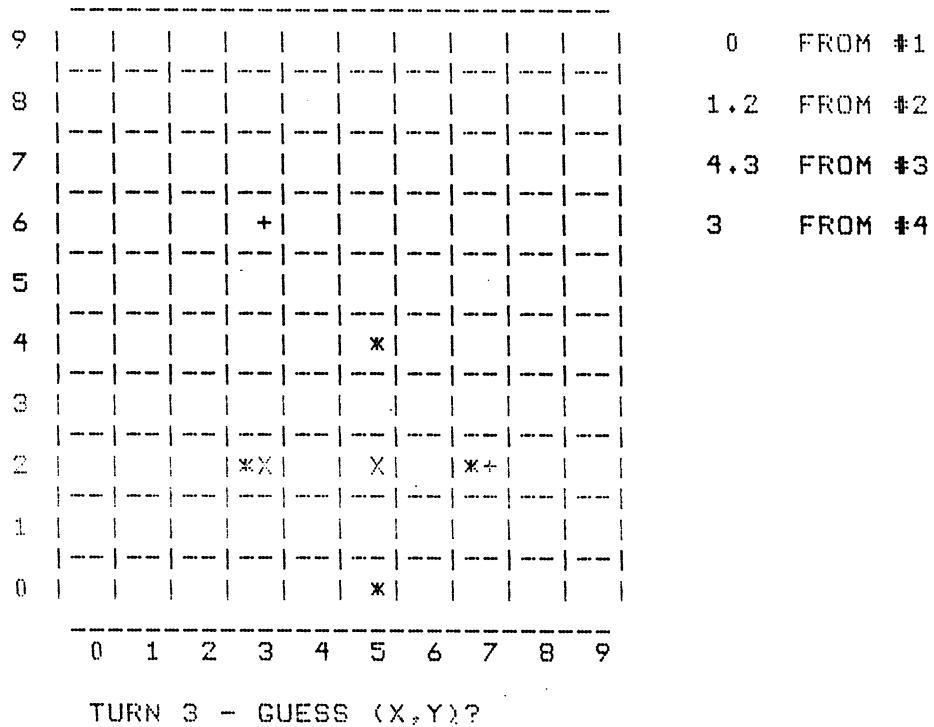

Figure 4. MUGWUMP Display Screen--Hunting for Mugwump #1

Only one square contains both symbols, and so square 7,2 would be a good third guess. Now, we won't spoil the fun by showing you what one of these very shy creatures looks like. That's for you to discover!

Remember, you must find all four mugwumps within ten turns. As you become more skilled at MUGWUMP, try to beat your own record by locating all four in fewer guesses.

PLAYING MORE ROUNDS AND RESTARTING THE GAME

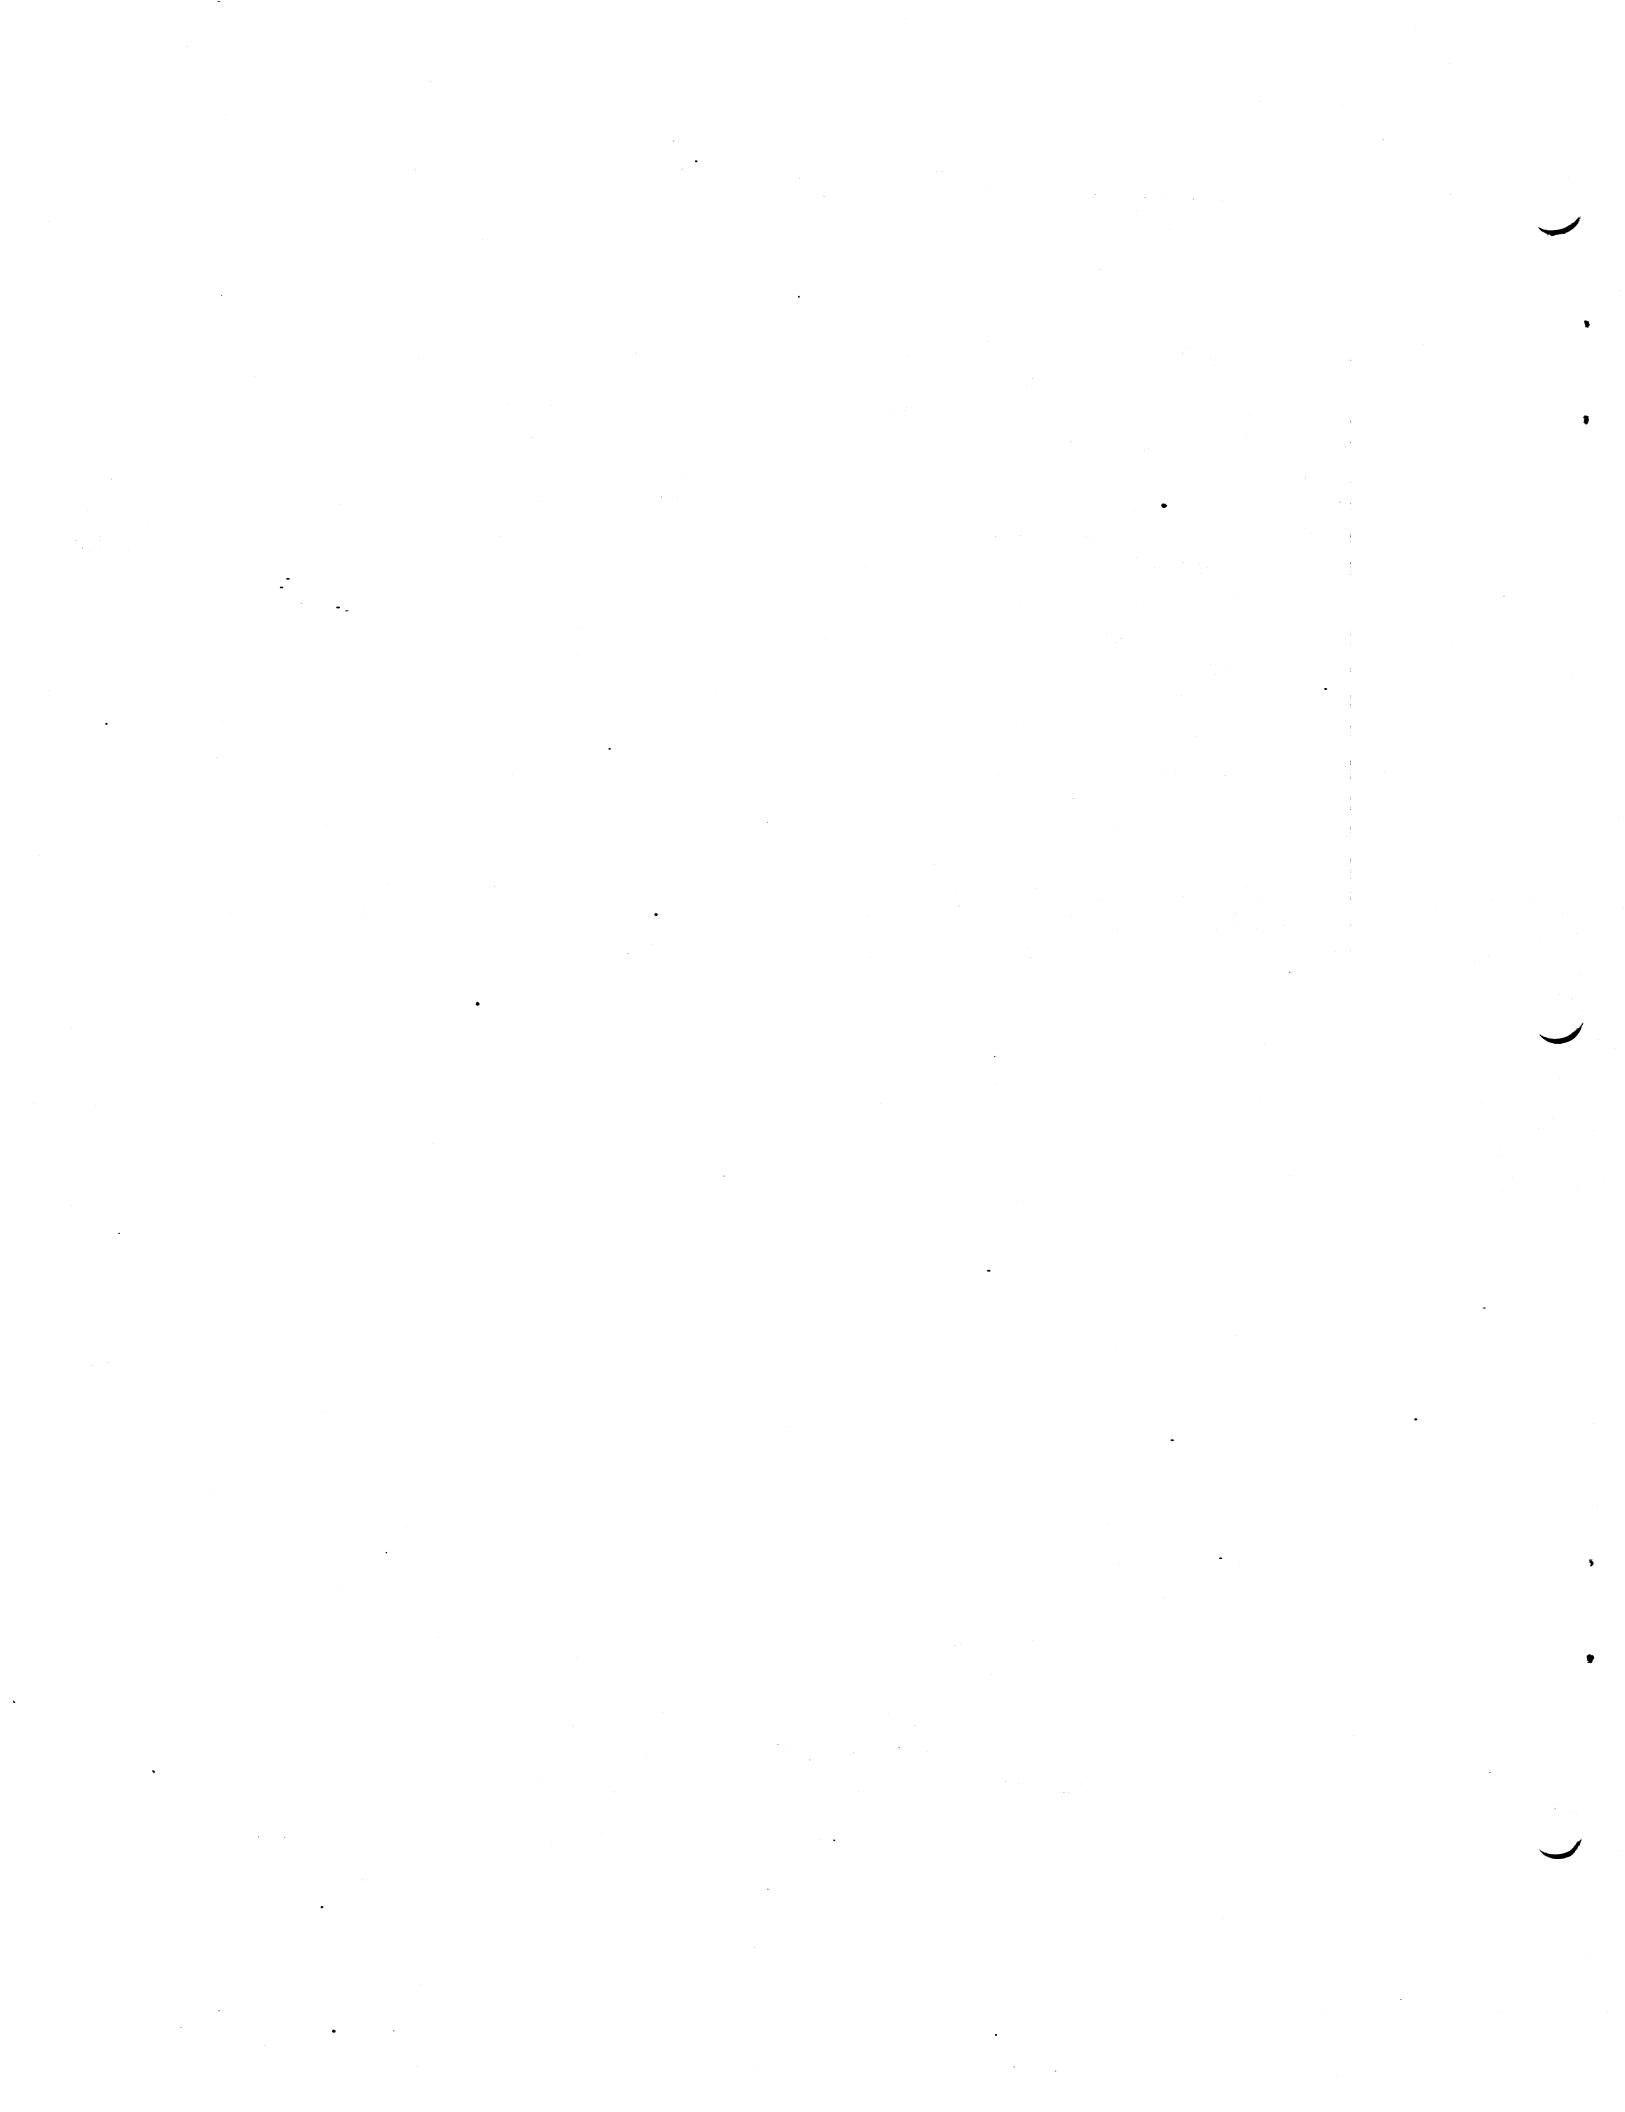

You can interrupt a game at any time and start over by pressing the START key. You can also play more rounds of MUGWUMP in the same way.

Limited Warranty on Media and Hardware Accessories. We, Atari, Inc., guarantee to you, the original retail purchaser, that the medium on which the APX program is recorded and any hardware accessories sold by APX are free from defects for thirty days from the date of purchase. Any applicable implied warranties, including warranties of merchantability and fitness for a particular purpose, are also limited to thirty days from the date of purchase. Some states don't allow limitations on a warranty's period, so this limitation might not apply to you. If you discover such a defect within the thirty-day period, call APX for a Return Authorization Number, and then return the product along with proof of purchase date to APX. We will repair or replace the product at our option.

You void this warranty if the APX product: (1) has been misused or shows signs of excessive wear; (2) has been damaged by use with non-ATARI Home Computer products; or (3) has been serviced or modified by anyone other than an Authorized ATARI Computer Service Center. Incidental and consequential damages are not covered by this warranty or by any implied warranty. Some states don't allow exclusion of incidental or consequential damages, so this exclusion might not apply to you.

Disclaimer of Warranty and Liability on Computer Programs. Most APX programs have been written by people not employed by Atari, Inc. The programs we select for APX offer something of value that we want to make available to ATARI Home Computer owners. To offer these programs to the widest number of people economically, we don't put APX products through rigorous testing. Therefore, APX products are sold "as is," and we do not guarantee them in any way. In particular, we make no warranty, express or implied, including warranties of merchantability and fitness for a particular purpose. We are not liable for any losses or damages of any kind that result from use of an APX product.

Review Form

We're interested in your experiences with APX programs and documentation, both favorable and unfavorable. Many of our authors are eager to improve their programs if they know what you want. And, of course, we want to know about any bugs that slipped by us, so that the author can fix them. We also want to know whether our

instructions are meeting your needs. You are our best source for suggesting improvements! Please help us by taking a moment to fill in this review sheet. Fold the sheet in thirds and seal it so that the address on the bottom of the back becomes the envelope front. Thank you for helping us!

1. Name and APX number of program.

2. If you have problems using the program, please describe them here.

3. What do you especially like about this program?

4. What do you think the program's weaknesses are?

5. How can the catalog description be more accurate or comprehensive?

6. On a scale of 1 to 10, 1 being "poor" and 10 being "excellent", please rate the following aspects of this program:

- Easy to use
- User-oriented (e.g., menus, prompts, clear language)
- Enjoyable
- Self-instructive
- Useful (non-game programs)
- Imaginative graphics and sound

7. Describe any technical errors you found in the user instructions (please give page numbers).

8. What did you especially like about the user instructions?

9. What revisions or additions would improve these instructions?

10. On a scale of 1 to 10, 1 representing "poor" and 10 representing "excellent", how would you rate the user instructions and why?

11. Other comments about the program or user instructions:
